

For your Learning Management System (LMS) Mobile App project, usability testing is the process of checking whether students and lecturers can use the app easily, efficiently, and without confusion.

Usability Testing Notes

1. Purpose of Usability Testing

Ensure the app is easy to learn and use.

Identify problems users face while completing tasks.

Improve the user interface before the final release.

Increase user satisfaction and productivity.

2. Objectives

Determine whether users can complete common tasks successfully.

Measure how long it takes users to perform tasks.

Identify navigation and interface issues.

Collect user feedback for future improvements.

3. Test Participants

A small group of users representing the target audience:

5–10 students

2–5 lecturers

4. Test Environment

Android or iOS smartphones.

Quiet environment with internet access.

Prototype created using tools such as Figma, Adobe XD, or another prototyping tool.

5. Test Scenarios

Participants are asked to perform tasks such as:

Log into the app.

Open a course and view learning materials.

Read the latest announcements.

Submit an assignment.

Participate in a discussion forum.

View grades and lecturer feedback.

Log out.

6. Evaluation Metrics

Measure the following:

Task Success Rate – Percentage of users who complete a task.

Time on Task – Time taken to finish each task.

Error Rate – Number of mistakes made.

Ease of Use – User ratings on how easy the app is to use.

User Satisfaction – Overall satisfaction after using the app.

7. Sample Feedback Questions

After testing, ask users:

Was the app easy to navigate?

Were you able to find course materials quickly?

Was assignment submission straightforward?

Did you experience any difficulties?

What improvements would you recommend?

8. Possible Issues Found

Buttons may be too small.

Navigation may be confusing.

Important features may be difficult to locate.

Assignment upload process may take too many steps.

Slow loading of announcements or discussion pages.

9. Recommendations

Based on test results:

Simplify navigation menus.

Use clear labels and icons.

Reduce the number of steps required to submit assignments.

Improve loading speed.

Increase text and button sizes for better accessibility.

Expected Outcome

After usability testing, the LMS mobile app should allow users to:

Access course materials quickly.

Read announcements without difficulty.

Submit assignments successfully.

Participate in discussion forums easily.

View grades and feedback with minimal effort.

A successful usability test indicates that users can complete these tasks efficiently, with few errors, and report a high level of satisfaction.
